Yes, we changed that after realizing some shallow samples were collected at 34'.

Hi Dean,

Thank you for the quick reply and the information. I appreciate it.

Also, your new map has a depth from 20 to 34 feet instead of 20 to 30 feet. Is that right?

Thank you again,  
Jenny

Jennifer: here's the new Figure 6. A couple points were missing and now fixed.

The point to the east of the range in shallow zone was 4.61 mg/l (CRL)  
The point to the NW of CSD in deep zone was 4.53 mg/l (CRL).

The highest N concentration downgradient was 59.2 (CRL result), just to east of CSD (sample C5ab- shallow).

For UNL N results, the highest N concentration downgradient was 48.759 (deep zone).

Thanks and good luck on your detail.  
- Dean

Enforcement confidential and deliberative. Do not release for FOIAs or discoveries?

Hi Dean,

# Ex. 5 Deliberative Process (DP)

Then, on the deeper CRL map, there is a yellow dot just northwest of the CSD Facility. What is that point?

Finally, I attached both of the maps so you can quickly download them.

Thank you for your help with this,  
Jenny
